

The Cinematic Digital Ecosystem of SourceTrace: An Exhaustive Master Architecture for Regulatory and Sustainability Web Experiences

The global agricultural landscape faces a historic convergence of mandatory environmental standards and data-driven supply chain tracking.¹ As organizations transition from voluntary corporate social responsibility targets to strict regulatory frameworks, sustainability reporting must shift from high-level estimates to verified, farm-level data.³

This master architecture defines the strategic, visual, and technical blueprint for integrating fifteen specialized compliance and environmental solution pages into the digital home of SourceTrace Systems.⁵ By combining cinematic design with smooth scrollytelling techniques, this framework communicates the core mission of SourceTrace: empowering smallholder farmers, improving over two million livelihoods, and managing more than three million hectares across thirty-seven countries and four continents.⁶

The Master Cinematic Framework and Web Core

To establish a unified, cinematic user experience, the website utilizes a standardized, high-performance visual core. The design leverages a deep-space, high-contrast dark palette—comprising rich charcoal grays, deep forest greens, and glowing neon-emerald vector overlays—to visually reinforce the brand's flagship DATAGREEN technology.⁵

To prevent the common pitfall of sacrificing page speed for visual spectacle, the front-end architecture is engineered for rapid load times.¹⁰ Instead of heavy video scrubbing, the platform uses smooth scroll libraries, CSS-driven transforms, canvas-based vector operations, and highly optimized Lottie animations to guarantee a first contentful paint of under one second and a time-to-first-byte of under 0.4 seconds, ensuring optimal performance and search engine ranking.¹¹

Page-by-Page Technical and Narrative Specifications

Page 1: Compliance Overview

Cinematic Storyboard and Narrative Flow

The experience begins with an orbital view of a dark-mode globe, with glowing red laser coordinates tracing agricultural trade corridors from Latin America, West Africa, and Southeast Asia toward European and North American ports.¹ Shifting text highlights the arrival of a new regulatory era, emphasizing that unverified shipments risk border rejection.¹ As the user scrolls, the camera zooms into European border checkpoints as red coordinate lines transition into secure green vector pathways.¹⁴ This visual represents the core value proposition of SourceTrace: transforming regulatory friction into verified trade advantages.¹⁴

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Dark-mode earth viewport with illuminated shipping corridors. ¹ Prompt: "Cinematic global orthographic map, dark charcoal grid, glowing emerald and red vector lines, 8k resolution, volumetric lighting"	Interactive regulatory timeline toggle highlighting active enforcement dates. ²	Canvas-driven particle flow along shipping lanes, accelerating based on scroll speed. ¹¹
The Conflict (Scene 2)	High-contrast split-screen representing manual paperwork versus digital	Hover-triggered data cards displaying financial penalties and shipment rejection	GSAP-controlled vertical slide-and-reveal of compliance risks as

	records. ⁴ <i>Prompt: "Abstract split-screen, left side chaotic stacked paper files, right side glowing clean green digital ledger, high contrast"</i>	risks. ¹	scroll progresses. ¹⁰
The Core Solution (Scene 3)	Animated DATAGREEN core diagram receiving raw farm data and outputting certified compliance documents. ⁵ <i>Prompt: "Isometric software core engine, glowing green circuits, translucent data packets, high-tech abstract"</i>	Clickable network nodes showcasing farmer profiling, GIS mapping, and blockchain verification. ⁹	SVG path animation showing real-time data flows into the central DATAGREEN server. ⁹
Action & Testimonial (Scene 4)	Testimonial panel featuring Chetna Organic's value chain success. ¹ <i>Prompt: "Professional agricultural cooperative setting, dark green accents, clean modern UI"</i>	Dynamic request form with global location selectors and communication consents. ⁵	CSS hardware-accelerated fade-and-scale of the submission form on viewport entry. ¹⁰

Page 2: EUDR (Overview)

Cinematic Storyboard and Narrative Flow

A stark black screen is bisected by a single, luminous green horizontal line representing the December 31, 2020 forest cut-off date.¹ As the user scrolls, satellite imagery of tropical forest canopies slides beneath the timeline.¹

Areas deforested before the cut-off remain green, while areas deforested after the date glow bright orange, signaling a compliance violation.¹ The narrative guides the user through the strict requirements of the EU Deforestation Regulation, emphasizing that any commodity sourced from these orange zones is banned from entry into the EU.¹

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Horizontal timeline overlaying tropical forest canopies. ¹ <i>Prompt: "Aerial drone shot of dense rainforest canopy, divided by a glowing neon-emerald timeline, high-contrast, atmospheric"</i>	Luminous timeline scrubber that adjusts forest change overlays based on year. ¹	CSS 3D translation of forest layers, creating a realistic depth perspective during scroll. ¹⁹
The Mandate (Scene 2)	Detailed grid showcasing the seven regulated commodities: cocoa, coffee, soy, palm, rubber, cattle, wood. ¹ <i>Prompt: "Graphic representation of raw cocoa beans, coffee cherries, and timber, clean editorial grid"</i>	Hover card selectors displaying specific regional risk ratings and verification requirements. ¹	GSAP stagger animation revealing each commodity card in sequence as the viewport is entered. ¹⁰
Risk & Penalties (Scene 3)	Global risk heatmap highlighting country-level deforestation	Interactive risk calculator projecting potential border inspection	Canvas-rendered scanning wave sweeping across the map to locate

	ratings. ¹ <i>Prompt: "Minimalist global vector map, high-contrast grays, highlighted regional hotspots in glowing orange"</i>	rates and cargo seizure risks. ¹	high-risk areas. ¹¹
Action Portal (Scene 4)	CTA block with background video of coffee mapping in Colombia and cocoa mapping in Côte d'Ivoire. ² <i>Prompt: "Sleek contact section, blurred video background of farmers with mobile mapping devices"</i>	Direct link to register for a customized EUDR value chain readiness assessment. ⁵	Smooth parallax scroll separating foreground text cards from the active background video. ²⁰

Page 3: Explore EUDR Solutions

Cinematic Storyboard and Narrative Flow

This page delivers a detailed technological walkthrough of the DATAGREEN platform in action.⁵ The screen transitions into an isometric agricultural landscape. As the user scrolls, a mobile device mockup emerges from the bottom, demonstrating a field agent mapping farm coordinates.¹⁷

The view then shifts to an orbital perspective, showing a Sentinel satellite scanning the mapped coordinates to verify zero deforestation against historical archives.¹ The scroll continues to trace the physical journey of the commodity from the field, through local warehouses, into shipping containers, culminating in the automated generation of an EU-compliant Due Diligence Statement.¹

---> (DATAGREEN Mobile: GPS Polygon Mapping)

|

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	3D rendering of the DATAGREEN mobile application overlaying a farm plot. ¹⁷ <i>Prompt: "Modern mobile app mockup displaying a green vector farm map, transparent glass layers, dark green environment"</i>	Interactive phone screen showcasing real-time GPS polygon tracking. ¹	Smooth vertical slide of the mobile device on scroll, locking into a central position. ¹⁰
GPS Mapping (Scene 2)	Isometric model of smallholder plots with corner coordinate pins. ²¹ <i>Prompt: "Clean 3D land plot, distinct green boundaries, shining location marker pins, abstract digital mesh"</i>	Polygon calculation tool showing automatic calculation of total land area in hectares. ²¹	SVG draw animation plotting boundaries and dropping pins sequentially based on scroll depth. ¹⁰
Satellite Check	Satellite sweep	Before-and-after	CSS clip-path

(Scene 3)	visual showing historical forest cover comparison. ¹ <i>Prompt: "Orbital view of agricultural plots, glowing laser scanner, data overlays displaying forest density"</i>	slider comparing pre-2020 forest cover to current land use. ¹	transition linked directly to the scroll position, revealing historical changes. ¹⁰
Supply Chain (Scene 4)	Blockchain node animation tracing commodity custody from farm to cooperative. ¹⁶ <i>Prompt: "Connected blocks in 3D space, luminous green data flow, modern industrial logistics aesthetic"</i>	Clickable supply chain nodes showing farmer profiles, harvest dates, and storage conditions. ¹⁶	WebGL rendering of glowing data nodes linking together to form a tamper-proof block ledger. ¹⁶
TRACES Export (Scene 5)	Mockup of the official EU TRACES portal interface displaying automated form completion. ¹ <i>Prompt: "Modern software interface, official European regulatory styling, automated form filling, glowing checkmark"</i>	Interactive "Generate Statement" button demonstrating automated report compilation. ¹	CSS slide-and-reveal of complete, audit-ready compliance documents on button click. ¹⁰
CTA Block (Scene 6)	Clean corporate footer with client success stories from Cargill and NEI. ¹ <i>Prompt:</i>	Interactive demo request portal with data processing consent fields. ⁵	SVG checkmark animations and smooth form-field focus highlights. ¹⁰

	<i>"Elegant corporate contact panel, dark green charcoal gradients, minimalist typography"</i>		
--	--	--	--

Page 4: CSRD (Overview)

Cinematic Storyboard and Narrative Flow

The page opens with a highly structured corporate interface, mimicking a modern ESG annual report. As the user scrolls, the report sections pull apart along the Z-axis, revealing that the reported environmental and social metrics are rooted in physical activities on remote smallholder farms.⁴

The narrative explains the "Double Materiality" mandate of the Corporate Sustainability Reporting Directive: companies must report both their financial risks from climate change and their operations' direct impacts on people and ecosystems.³ The visual highlights that for food and beverage companies, over 90% of their total impacts exist outside their corporate facilities, deep within their agricultural supply chains.⁴

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Abstract editorial report design transitioning into a 3D landscape. ³ <i>Prompt: "Graphic design of an annual report, text elements morphing into 3D green land parcels, high-contrast"</i>	Layer-selection tabs allowing users to swap between Financial and Impact Materiality views. ³	CSS hardware-accelerated translation creating depth separation between text and landscape layers. ¹⁰
Materiality (Scene 2)	Double materiality quadrant diagram	Drag-and-drop quadrant mapping	Canvas-drawn grid lines and plot points

	mapping impact against financial risk. ²⁴ <i>Prompt: "Modern scientific coordinate graph, clean charcoal axis, highlighted green vector quadrants, minimalist"</i>	tool illustrating risk positioning for major agricultural commodities. ²⁴	fading in dynamically on scroll. ¹¹
Value Chain (Scene 3)	3D bar chart highlighting Scope 1, 2, and 3 emissions split. ⁴ <i>Prompt: "Graphic 3D bar chart, dark gray background, high-contrast columns, largest column glowing green"</i>	Interactive slider revealing that up to 60% of total food industry emissions are locked in Scope 3 sourcing. ⁴	GSAP-controlled growth of chart columns, animating based on scroll progression. ¹⁰
CTA Portal (Scene 4)	Editorial block featuring insights on value chain due diligence and CSDDD. ² <i>Prompt: "Elegant editorial text card, clean sans-serif typography, dark gradient accents"</i>	Fast-access link to download the comprehensive corporate CSRD preparation checklist. ²⁶	Smooth vertical movement of text blocks, creating a refined, premium editorial feel. ²⁰

Page 5: Explore CSRD Solutions

Cinematic Storyboard and Narrative Flow

This solution page demonstrates how SourceTrace systematically bridges the farm-level data gap.⁴ As the user scrolls, a stylized network map of global suppliers appears on the screen. The view zooms in from "Tier 1 Importers" down to "Tier 3 Agricultural Cooperatives," demonstrating how DATAGREEN aggregates field-level environmental data from thousands of smallholders.² The visual demonstrates the platform's AI document verification system, which automatically ingests, analyzes, and validates supplier-submitted certifications, audit snapshots, and

self-assessment questionnaires to compile audit-ready ESG profiles.²⁵

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Stylized geographic network map showing global supplier nodes. ² <i>Prompt: "Abstract world network, interconnected luminous green nodes, dark grays, premium SaaS UI style"</i>	Search tool allowing users to query supplier nodes by region and commodity type. ²¹	SVG line drawing connecting global hubs to local agricultural cooperatives on scroll. ¹⁰
Aggregation (Scene 2)	Central data hub receiving multiple inputs: spreadsheets, photos, and satellite data. ²¹ <i>Prompt: "Central modern server hub, glowing green vector paths, diverse incoming data icons, high-tech"</i>	Interactive data dashboard demonstrating automated CSV, mobile, and API data aggregation. ⁹	GSAP-controlled movement of data icons, floating toward the central server node. ¹⁰
AI Assessment (Scene 3)	Abstract visualization of an AI engine analyzing supplier ESG documents. ³ <i>Prompt: "Clean UI overlay, scanning lasers, highlighting text areas in a</i>	Document drop zone mockup showing automated parsing of ISO certificates and audit files. ²⁵	CSS mask transitions and glowing laser lines simulating real-time document analysis. ¹⁰

	<i>digital document, dark mode"</i>		
Supplier Status (Scene 4)	Visual checklist tracking supplier compliance against ESRS disclosure standards. ³ <i>Prompt: "Sleek SaaS compliance checklist, glowing green checkmarks, professional UI typography"</i>	Hover-triggered cards displaying individual supplier maturity levels and corrective actions. ³	GSAP vertical stagger, checking off items sequentially as the user scrolls. ¹⁰
CTA Segment (Scene 5)	Dark editorial section displaying case studies on sustainable value chain management. ⁵ <i>Prompt: "High-contrast contact panel, minimalist typography, green glowing buttons"</i>	Request portal for a customized value chain ESG data-collection pilot. ⁴	CSS hardware-accelerated fade-and-scale of the submission form on viewport entry. ¹⁰

Page 6: ESRS (Overview)

Cinematic Storyboard and Narrative Flow

The page opens with a stark, minimal architectural grid. Twelve floating blocks appear on the screen, representing the twelve topical standards of the European Sustainability Reporting Standards.²⁷

On scroll, ten of the blocks fade into the background, leaving two key environmental pillars highlighted in vibrant green: **ESRS E1 (Climate Change)** and **ESRS E4 (Biodiversity and Ecosystems)**.²⁷ The view then focuses on these two blocks, which expand to reveal the specific disclosure requirements that agricultural companies must address, including land-use change impacts, greenhouse gas emissions, and dependencies on essential ecosystem services.²⁴

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Floating architectural grid representing the twelve ESRS pillars. ²⁷ <i>Prompt: "Minimalist 3D architectural columns, dark gray blocks, floating in structured grid, glowing green highlights"</i>	Clickable pillar selector to isolate social, environmental, and governance disclosure paths. ²⁷	CSS 3D rotation and translation of pillars, aligning them into a grid on scroll. ¹⁹
E1: Climate (Scene 2)	Atmospheric visual representing carbon emissions and temperature rise. ²⁸ <i>Prompt: "Abstract representation of rising warm air currents, glowing orange and green wave lines, clean scientific aesthetic"</i>	Dynamic emissions chart mapping on-farm nitrogen fertilizer use and livestock emissions. ²⁸	Canvas-rendered wave animations displaying fluctuating greenhouse gas levels. ¹¹
E4: Biodiversity (Scene 3)	Illustrated ecosystem model showcasing species habitats and water cycles. ²⁴ <i>Prompt: "Detailed cross-section of a farm ecosystem, root networks, water flow, wildlife indicators, clear"</i>	Hover triggers highlighting ecosystem services like crop pollination and soil water retention. ²⁴	GSAP-controlled path drawing tracing water flow and root growth on scroll. ¹⁰

	<i>graphics"</i>		
CTA Block (Scene 4)	Receptive, dark panel featuring a downloadable ESRS mapping guide. ¹⁵ <i>Prompt: "Sleek download portal, high contrast charcoal background, emerald green download buttons"</i>	Direct link to schedule a structured materiality assessment alignment call. ¹⁵	CSS slide-and-fade of the download card as the viewport reaches the bottom of the page. ¹⁰

Page 7: Explore ESRS Solutions

Cinematic Storyboard and Narrative Flow

This page demonstrates how satellite imagery and artificial intelligence quantify biodiversity metrics for ESRS E4.³⁰ The user sees a high-resolution satellite map of a farm. On scroll, a scanning beam sweeps across the map, transforming raw imagery into a colored habitat map.³⁰

Different colors represent distinct land cover classes: green for forests, yellow for crops, and orange for natural hedgerows.³⁰ The visual highlights how the platform calculates the "Space for Nature" metric, verifying whether at least 10% of the agricultural land is managed as natural habitat.³⁰ The display then shows habitat connectivity scores and proximity to protected Natura 2000 conservation zones.³⁰

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Satellite map of a farm boundary transitioning into classified land zones. ³⁰ <i>Prompt: "High-resolution satellite view of agricultural land, transforming into colored classified zones, digital interface"</i>	Before-and-after slider showing the division of raw satellite imagery into classified habitats. ³⁰	CSS clip-path wipe linked directly to scroll position, revealing the classified map. ¹⁰
Space for Nature (Scene 2)	Highlighting of natural areas on a farm: woodlands, wetlands, and hedgerows. ³⁰ <i>Prompt: "Farm map overlay highlighting natural tree rows and grassy wetlands in glowing emerald"</i>	Automated calculator showing "Space for Nature" percentage relative to EU conservation targets. ³⁰	SVG draw animation calculating and displaying boundary lines in real-time. ¹⁰
Connectivity (Scene 3)	Structural model displaying ecological pathways and wildlife corridors across agricultural land. ²⁴ <i>Prompt: "Abstract glowing vector lines connecting isolated"</i>	Clickable path markers showing corridor health, size, and ecosystem connection scores. ²⁴	WebGL rendering of pulsing light particles flowing along corridors, illustrating animal movement. ¹¹

	<i>patches of forest on a farm map"</i>		
Proximity Risks (Scene 4)	Geographic overlay displaying farm coordinates relative to Natura 2000 protected boundaries. ³⁰ <i>Prompt: "Sleek regional map, glowing orange protected boundaries, farm coordinate pins"</i>	Distance check tool calculating proximity to national parks and protected habitats. ²⁹	GSAP zoom-and-scale of the map view on scroll, focusing on farms near protected zones. ¹⁰
CTA & Demo (Scene 5)	Dark layout featuring a button to drop a pin and request a custom land biodiversity snapshot. ³⁰ <i>Prompt: "Professional contact block, map interface with a glowing green location pin"</i>	Pin-drop map component with automated registration form and data consents. ⁵	CSS fade-and-scale animations and micro-interaction button states on hover. ¹⁰

Page 8: CBAM (Overview)

Cinematic Storyboard and Narrative Flow

The page opens with a dramatic, low-angle perspective of a massive container ship at sea. Overhead, a floating digital tariff counter displays import prices in real-time. As the user scrolls, a thick, orange neon "Carbon Border Adjustment Mechanism" wall rises from the ocean directly in the ship's path, blocking its entry into Europe.¹³

The narrative explains that from January 1, 2026, the EU will levy carbon tariffs on carbon-intensive imports to prevent carbon leakage.¹³ The screen shifts focus to chemical fertilizers, showing how the carbon footprint of these agricultural inputs can directly impact import margins.³²

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Low-angle view of a cargo ship approaching a digital tariff gate. ¹³ <i>Prompt: "Massive modern container ship, dark blue stormy sea, orange neon glowing light wall rising, cinematic lighting"</i>	Import timeline tracker displaying active carbon border pricing phases. ¹³	CSS translation of the ship and cargo containers, creating forward movement on scroll. ¹⁹
The Target (Scene 2)	Microscopic view of nitrogen fertilizer granules with chemical data overlays. ³² <i>Prompt: "Close-up of white fertilizer pellets on dark background, glowing chemical formulas, clean design"</i>	Commodity selection list displaying import tax rates for steel, aluminum, cement, and fertilizers. ¹³	GSAP-controlled vertical reveal of chemical data cards as scroll depth increases. ¹⁰
Carbon Tariffs (Scene 3)	Bar chart displaying regional ETS pricing gaps relative to the EU standard. ³¹ <i>Prompt: "Sleek financial bar chart, high-contrast grays, highlighted regional price gap columns"</i>	Interactive carbon border cost exposure calculator based on country of origin. ¹³	GSAP horizontal growth of comparison bars on viewport entry. ¹⁰
CTA Block (Scene 4)	Clean corporate footer with a downloadable	Registration portal to request a detailed CBAM	CSS slide-and-fade of the download card as the

	CBAM agricultural supply chain preparation guide. ¹³ <i>Prompt: "Elegant corporate contact panel, dark green charcoal gradients, minimalist typography"</i>	margin risk assessment. ¹³	viewport reaches the bottom of the page. ¹⁰
--	---	---------------------------------------	--

Page 9: Explore CBAM Solutions

Cinematic Storyboard and Narrative Flow

This page demonstrates how SourceTrace tracks, verifies, and manages actual embedded emissions data from global fertilizer producers.¹³ The user sees a digital representation of a chemical manufacturing facility. Scrolling down traces a pipeline from the production plant directly to agricultural fields.³³ The visual highlights the calculation of direct and indirect emissions at the production stage using actual supplier data.¹³ The scroll continues to reveal the automated generation of CBAM-compliant quarterly reports and annual declarations for the EU CBAM Registry, showing how the system helps importers avoid default penalty values.¹³

CBAM Cost Adjustment Formula

To accurately assess financial risk under the definitive phase of the Carbon Border Adjustment Mechanism, the platform utilizes the official carbon price gap and emission intensity calculation³¹:

CBAM Cost Adjustment = $\left[(EF_{\text{direct}} + EF_{\text{indirect}})_{\text{export market}} - (EF_{\text{EU}} \times \text{Market phase-in fact}$

Structural and Visual Specification Matrix

	fertilizer plant.³³ <i>Prompt: "Clean industrial chemical facility, green and white accents, volumetric light, isometric layout"</i>	vs default emission tracking paths.¹³	database repositories on scroll.¹⁰
Supplier Data (Scene 2)	Visual representation of automated supplier questionnaires and data collection.¹³ <i>Prompt: "Sleek SaaS interface, supplier onboarding checklist, data validation checks"</i>	Interactive cost simulator demonstrating default penalty values vs verified actual emissions savings.¹³	GSAP-driven movement of data packets along coordinate pathways, confirming verification.¹⁰
Embedded Carbon (Scene 3)	Molecular structure diagram of fertilizer raw inputs showing direct and indirect carbon intensity.²⁸ <i>Prompt: "3D molecular structures, glowing atom links, clean scientific data display"</i>	Toggle selector showcasing Scope 1 (direct) and Scope 2 (indirect) emissions paths.³¹	Canvas-drawn particle arrays representing moving molecular components on scroll.¹¹
Compliance Export (Scene 4)	Visual mockup of the EU CBAM Registry submission interface.¹³ <i>Prompt: "Official portal dashboard, automated data fields populating with green checkmarks, clean design"</i>	Drag-and-drop document upload interface showing verified XML generation.¹³	CSS page wipe revealing finished, compliant quarterly declarations.¹⁰

CTA Portal (Scene 5)	Sleek dark footer with partner contact options and case studies on agricultural decarbonization. ³² <i>Prompt: "High-contrast contact panel, minimalist typography, glowing green action buttons"</i>	Direct scheduling form to connect with SourceTrace agricultural CBAM integration specialists. ⁵	CSS hardware-accelerated fade-and-scale of the submission form on viewport entry. ¹⁰
-----------------------------	---	--	---

Page 10: Forest Risk Overview

Cinematic Storyboard and Narrative Flow

The page opens with a high-definition, slowly rotating satellite view of the Amazon basin. A digital overlay displays a live, ticking counter representing global tropical forest loss.¹⁸ As the user scrolls, the satellite view transitions through time, showing once-dense forest tracts fragmenting into cattle pastures and soy fields.¹⁸

The narrative explains the critical role of forests in global climate regulation, carbon sequestration, and biodiversity preservation.¹⁸ The visual highlights that supply chains linked to forest-risk commodities (soy, beef, cocoa, palm oil) face significant commercial and regulatory challenges.¹

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	High-definition rotating satellite view of the Amazon basin. ¹⁸ <i>Prompt: "Photorealistic orbital view of a lush rainforest basin, slow"</i>	Active ticking counter showing global forest loss in square meters. ¹⁸	Canvas-driven slow rotation of the earth globe on the scroll axis. ¹¹

	<i>rotational movement, volumetric clouds, dark backdrop"</i>		
Deforestation (Scene 2)	Time-lapse satellite comparison showing forest tract fragmentation. ¹ <i>Prompt: "Drone shot of dense green forest, transitioning to segmented agricultural fields, high contrast"</i>	Slide transition comparison of regional canopy cover changes from 2000 to present. ¹	CSS clip-path wipe linked directly to scroll position, revealing forest cover changes. ¹⁰
Commodity Risk (Scene 3)	Illustrated grid showcasing forest-risk commodities. ¹² <i>Prompt: "Graphic display of palm oil fruit, cattle, and soy plants, clean editorial grid, modern styling"</i>	Hover card selectors showing specific regional forest-risk ratings and regulations. ¹²	GSAP-controlled vertical reveal of commodity cards as scroll depth increases. ¹⁰
CTA Block (Scene 4)	Clean corporate footer with a downloadable forest risk assessment checklist. ²⁶ <i>Prompt: "Elegant corporate contact panel, dark green charcoal gradients, minimalist typography"</i>	Registration portal to request a detailed supply chain forest-risk evaluation. ¹	CSS slide-and-fade of the download card as the viewport reaches the bottom of the page. ¹⁰

Cinematic Storyboard and Narrative Flow

This page delivers a detailed walkthrough of SourceTrace’s satellite-driven forest monitoring technology.¹ The screen displays a 3D model of a farm plot.¹ Scrolling down reveals multiple layers of satellite data: canopy cover thickness, tree species diversity, and historical forest boundaries.¹

The scroll continues to trace the transition of a farm from high-risk monoculture to a sustainable, forest-friendly agroforestry system, demonstrating how tree planting can improve biodiversity, restore soil health, and sequester carbon.¹²

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	3D terrain mesh showing a farm boundary and satellite monitoring sweep. ¹ Prompt: "Luminous green 3D vector landscape mesh, sweeping orbital laser scan, dark gray background,	Map layer toggles allowing users to swap between canopy density and soil health views. ¹	CSS 3D rotation of the terrain mesh, aligning it with the scroll axis. ¹⁹

	<i>modern tech"</i>		
Canopy Scan (Scene 2)	High-resolution forest canopy scan showing biomass density and carbon storage. ¹ <i>Prompt: "Cross-section of dense forest canopy, glowing carbon storage layers, clean data visualization"</i>	Slider tool revealing tree species diversity and canopy density percentages. ³⁴	GSAP-controlled layer peeling animation, revealing understory vegetation on scroll. ¹⁰
Agroforestry (Scene 3)	Cross-section model of an agroforestry farm. ¹² <i>Prompt: "3D cross-section of a farm with coffee plants growing under tall shade trees, deep root networks, clean graphics"</i>	Hover triggers highlighting biodiversity gains, soil organic carbon, and climate resilience. ¹²	SVG draw animation showing root growth and carbon absorption arrows on scroll. ¹⁰
Carbon Sequestration (Scene 4)	3D model of healthy soil structure showing organic matter and carbon sequestration. ¹⁸ <i>Prompt: "Detailed soil profile layers, glowing carbon organic matter particles, healthy root structures"</i>	Sequestration calculator showing carbon offset potential (up to 38 tons of CO_2 per hectare annually). ¹⁸	Canvas-drawn nutrient particle flow through soil layers, illustrating carbon storage. ¹¹

Page 12: Scope 3 Emissions (Overview)

Cinematic Storyboard and Narrative Flow

The page opens with a minimalist corporate headquarters view. On scroll, the walls pull back along the Z-axis to reveal a global supply chain network of raw agricultural sourcing.⁴

Semi-transparent clouds of methane (CH_4) and nitrous oxide (N_2O) rise from agricultural fields, illustrating where emissions originate.²⁸

The narrative explains that for food companies, agricultural sourcing alone represents the largest portion of their total carbon footprint.⁴ The scroll guides the user through the requirements of the GHG Protocol Land Sector and Removals Standard, emphasizing the necessity of tracing emissions to specific lands.³⁵

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Minimalist office space transitioning into a global agricultural map. ⁴ Prompt: "Modern corporate office boardroom, walls splitting open to reveal a massive glowing green world map, high contrast"	Sourcing region boundary selector displaying regional emission footprints. ³⁷	CSS 3D translation of corporate wall layers, revealing the global sourcing map on scroll. ¹⁹
Emissions Split	3D pie chart	Interactive slider	GSAP-controlled

(Scene 2)	comparing Scope 1, 2, and 3 emissions for food companies.⁴ <i>Prompt: "Graphic 3D pie chart, dark gray background, high-contrast slices, largest slice glowing green"</i>	showing that agricultural sourcing represents 40% to 60% of total emissions.⁴	growth of chart slices, animating based on scroll progression.¹⁰
LSR Standard (Scene 3)	Digital timeline displaying implementation milestones for the GHG Protocol LSR Standard.³⁵ <i>Prompt: "Sleek timeline graphic, modern typography, highlighted future milestone markers, clean style"</i>	Hover triggers showcasing land management, land use change, and carbon removals accounting rules.³⁵	GSAP vertical stagger, highlighting each milestone sequentially as the user scrolls.¹⁰
CTA Block (Scene 4)	Clean corporate footer with a downloadable guide to land sector carbon accounting.³⁵ <i>Prompt: "Elegant corporate contact panel, dark green charcoal gradients, minimalist typography"</i>	Registration portal to request a customized Scope 3 carbon compliance evaluation.³⁸	CSS slide-and-fade of the download card as the viewport reaches the bottom of the page.¹⁰

Page 13: Explore Scope 3 Emissions Solutions

Cinematic Storyboard and Narrative Flow

This page demonstrates how the CarbonTrace platform tracks, verifies, and calculates agricultural Scope 3 emissions.²² The screen displays a dual-view interface: a hand-held mobile

device on one side, and an orbital satellite view on the other.⁹ As the user scrolls, the mobile device records on-farm practices (fertilizer usage, tillage types, water management).²² Simultaneously, the satellite view tracks Soil Organic Carbon storage over time, illustrating carbon sequestration in agricultural soils.²² The scroll continues to reveal the automated generation of audit-ready Scope 3 emissions reports aligned with the GHG Protocol Land Sector and Removals Standard.³⁵

Scope 3 Sourcing Region Emissions

Under the Greenhouse Gas Protocol Land Sector and Removals Standard, the platform calculates net sourcing region emissions using actual practice tracking, land use change parameters, and soil organic carbon estimations ³⁶:

Scope 3 Sourcing Region Emissions (tCO₂e) = ∑ (Activity Data_{farm} × Emission Fac

Page 14: Sustainability Reporting (Overview)

Cinematic Storyboard and Narrative Flow

The page opens with a chaotic visual representing fragmented corporate data: scattered spreadsheets, handwritten logs, disjointed database systems, and dense PDF reports.⁴ As the user scrolls, a clean, structured visual grid appears on the screen, representing a unified reporting system.

The fragmented data streams migrate toward the grid, organizing themselves into clear, standardized sections.³ The narrative explains that relying on disjointed data sources introduces compliance risks and limits strategic visibility.³ The scroll guides the user toward a consolidated approach that connects field data directly to corporate reports.³

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	Chaotic cluster of legacy data formats (spreadsheets, paper files, disjointed database interfaces). ⁴ <i>Prompt: "Abstract 3D display of flying paper files, chaotic spreadsheets, and messy code lines, high contrast"</i>	Sourcing gap assessment checklist displaying legacy reporting challenges. ⁴	Canvas-driven movement of flying data elements, organizing themselves into a clean grid. ¹¹
The Friction (Scene 2)	Animated workflow showing manual data consolidation steps, illustrating delay and error risks. ³ <i>Prompt:</i>	Drag-and-drop comparison tool mapping manual steps against automated workflows. ³	GSAP-controlled slide transitions, revealing risk indicators as scroll progresses. ¹⁰

	<i>"Sleek corporate timeline visual, highlighted warning symbols, clean typography"</i>		
Consolidation (Scene 3)	Clean visual grid displaying a unified database system. ³ <i>Prompt: "Modern architectural grid, illuminated data storage nodes, glowing green connections, clean styling"</i>	Interactive dashboard mockup showing real-time data flows into central storage. ¹	SVG line drawing mapping connection paths across the grid on scroll. ¹⁰
CTA Block (Scene 4)	Clean corporate footer with a downloadable guide to unified sustainability reporting. ⁴ <i>Prompt: "Elegant corporate contact panel, dark green charcoal gradients, minimalist typography"</i>	Registration portal to request a detailed sourcing data-gap assessment. ⁴	CSS slide-and-fade of the download card as the viewport reaches the bottom of the page. ¹⁰

Page 15: Explore Sustainability Reporting Solutions

Cinematic Storyboard and Narrative Flow

This page delivers a comprehensive walkthrough of the DATAGREEN Executive Dashboard, demonstrating how the platform integrates all environmental, social, and operational metrics into a single interface.²¹ The user sees a high-fidelity rendering of the primary dashboard interface.

Scrolling down reveals specific modules: real-time procurement tracking, organic certification management, digital payments to smallholders, and automated audit-ready compliance reporting.¹⁷ The scroll continues to show interactive data visualizations, demonstrating how sourcing managers can filter metrics by crop, region, and supplier to verify sustainability performance.¹⁷

Structural and Visual Specification Matrix

Viewport Section	Static Visual Asset & AI Image Prompt	Interactive Component & Custom Tool	Animation Engine (GSAP / CSS / Canvas)
Hero (Scene 1)	3D rendering of the DATAGREEN Executive Dashboard interface. ²¹ Prompt: <i>"Detailed modern software dashboard, clean analytics charts, translucent data panels, glowing green accents"</i>	Dashboard module selector allowing users to toggle between procurement, payments, and emissions. ¹⁷	CSS 3D translation of dashboard layers, creating a realistic depth perspective on scroll. ¹⁹
Sourcing (Scene 2)	Real-time transaction cards showing crop volume, quality grade, and payment status. ¹⁷ Prompt: <i>"Sleek transaction cards, glowing status bars,</i>	Sourcing location search tool displaying real-time transport coordinates. ¹⁷	GSAP-driven movement of transaction cards, sliding into view on scroll. ¹⁰

	<i>agricultural icons, clean typography"</i>		
Certification (Scene 3)	Digital certificates representing Fairtrade, Organic, and GlobalG.A.P. standards.²¹ <i>Prompt: "Shining virtual certificates, geometric layout, glowing green highlights, clean corporate aesthetic"</i>	Toggle selector showcasing compliance checklists for major sustainability audits.²¹	GSAP-controlled path drawing tracing certificate validation lines on scroll.¹⁰
Social (Scene 4)	Visual chart displaying digital payments and direct transfers to smallholder farmers.¹⁷ <i>Prompt: "Luminous payment network diagram, vector lines connecting cooperative banks, clean styling"</i>	Interactive direct-payment simulator showing transaction path validation.¹⁷	Canvas-rendered payment particle flows along path lines, illustrating direct transfers.¹¹
CTA Portal (Scene 5)	Sleek dark footer with partner contact options and case studies on unified reporting.⁵ <i>Prompt: "High-contrast contact panel, minimalist typography, glowing green action buttons"</i>	Direct scheduling form to connect with SourceTrace sustainability reporting specialists.⁵	CSS hardware-accelerated fade-and-scale of the submission form on viewport entry.¹⁰

Architectural Performance and Technical Specifications

To support the cinematic scrollytelling experience across all modern browsers and device types, the frontend architecture relies on lightweight rendering techniques.¹⁰

Performance Targets

The frontend development team must adhere to the following strict performance parameters to ensure optimal search engine rankings and zero-lag rendering¹⁰:

- **First Contentful Paint (FCP):** $\leq 1.0s$ ¹¹
- **Time to First Byte (TTFB):** $\leq 0.4s$ ¹¹
- **Total Blocking Time (TBT):** $0ms$ ¹¹
- **Cumulative Layout Shift (CLS):** ≤ 0.01 ¹¹

Strategic Deployment and Content Roadmap

The integration of the cinematic sustainability platform onto the sourcetrace.com website is scheduled across three developmental phases, prioritizing core regulatory compliance, detailed field integrations, and executive reporting modules.¹

+-----+	+-----+	+-----+
Phase 1 (Month 1)	Phase 2 (Month 2)	Phase 3 (Month 3)
Core Architecture	Field Level Solutions	Executive Dashboards
+-----+	+-----+	+-----+

Deployment Strategy

- **Phase 1: Core Regulatory Foundations:** Deploy the primary CSS core, smooth scroll frameworks, and core page architectures. Implement Page 1 (Compliance Overview), Page 2 (EUDR Overview), and Page 4 (CSRD Overview) to establish immediate authority.¹
- **Phase 2: Field and Scientific Solutions:** Implement detailed data-collection and mapping pages: Page 3 (Explore EUDR Solutions), Page 5 (Explore CSRD Solutions), Page 6 (ESRS Overview), Page 7 (Explore ESRS Solutions), Page 10 (Forest Risk Overview), and Page 11 (Explore Forest Risk Solutions).¹
- **Phase 3: Executive Reporting and Dashboards:** Implement remaining carbon, tariff, and consolidated reporting solutions: Page 8 (CBAM Overview), Page 9 (Explore CBAM Solutions), Page 12 (Scope 3 Emissions Overview), Page 13 (Explore Scope 3 Solutions), Page 14 (Sustainability Reporting Overview), and Page 15 (Explore Sustainability Solutions).¹³
